Atlantis Energy Systems Inc., Press Release

12/07/2009

Atlantis Energy Systems Sunflower featured as 'picture of the month' in the November issue of Photon Magazine!

Atlantis Energy's 'Sunflowers', a unique decorative solar power collector, was chosen as 'picture of the month' for the November Photon Magazine issue, featured at the 2009 Solar Expo in Anaheim, California.

The 18 to 24 foot tall public art 'plants', generate electric power by day and, through their luminescent pistils, cast an electric glow at night. Total power rating of the 15 Sunflowers is 15.1 kW—or about enough to power 2.5 homes. They are located on a public pathway near the I-35 freeway running north to Dallas and Fort Worth.

The Sunflowers were designed by the Harries/Héder Collaborative, based in Cambridge, Massachusetts, and funded by Catellus Development Co., Applied Material, Inc., and the City of Austin's solar rebate program.

Atlantis Energy Systems' manufacturing plant is located in Poughkeepsie N.Y., where it received financial incentives for manufacturing facility development from the New York State Energy Research and Development Authority (NYSERDA). The main sales office is located in Sacramento, California.

For further information on the Sunflowers as well as other Atlantis sloped roof and building integrated photovoltaic (BIPV) products, please feel free to call the Atlantis Sacramento California sales office at 916.438.2930, or the Atlantis Orange County California sales office at 858.433.9743.
